# 1 General Information

## 1.1 Introduction

The Australian red meat industry has conducted demonstration projects with US importers using electronic messaging as an alternate protocol for managing illegible or missing shipping marks for the USA. The messages are formatted and based on EANCOM02 subset of UN/EDIFACT D01.B standard and sent as an attachment to an email or through an online messaging portal. Systems at either end or through the messaging portal are used to create, print and send messages as well as receive process and reply to the messages.

The eEXPORT Despatch Advice message contains the details of the goods being transferred including each individual items details, including bar code.

## 1.2 Document Purpose

The purpose of this document is to define the processes, explanation and examples of messages that establishments and system vendors must follow to create a system that may be suitable for approval by the Department of Agriculture for electronic eEXPORT Despatch Advice messages as an alternate protocol for managing illegible or missing shipping marks for the USA.

It is assumed that reader of this document have an understanding of the existing export protocols and EDIFACT messaging.

## 1.3 Intended Audience

This document is targeted to technical personnel of establishments and system vendors that create and utilise systems related to the export protocols and related processes.

## 1.4 Contact Information

For additional information or to clarify any details please contact:

Export Meat Program  
Australian Government Department of Agriculture

## 1.5 Approval

In order to minimise the risk of inappropriate systems from developers and users, the following system approval steps must be followed before the establishments approved arrangements will be considered acceptable for the use of the electronic eEXPORT Despatch Advice messages as an alternate protocol for managing illegible or missing shipping marks:

1. System Functional Testing. When the developer has constructed the eEXPORT Despatch Advice message system to the point that meaningful testing can take place, the developer must advise DEPARTMENT OF AGRICULTURE of development status and arrange for demonstration of the eEXPORT Despatch Advice message processes.
2. DEPARTMENT OF AGRICULTURE Acceptance Testing. When software development is deemed complete and stable, the establishment must apply for formal DEPARTMENT OF AGRICULTURE acceptance testing of the approved arrangements that include the eEXPORT Despatch Advice message processes.
3. Formal Approval. When DEPARTMENT OF AGRICULTURE is satisfied the system is acceptable, it will be formally approved.

## 1.6 Business Rules

A number of business rules have been prepared that define the use case options for utilisation of the eEXPORT Despatch Advice message systems. These business rules will vary for establishment to establishment and would be reflected in the establishment's approved arrangements.

### 1.6.1 When to use the eEXPORT Despatch Advice messages

An eEXPORT Despatch Advice messages is created by a registered establishment when an export eligible consignment is being sent to another registered establishment or product is being domesticated by a registered establishment.

### 1.6.2 Receipt of the eEXPORT Despatch Advice message

When product is physically received with printed export / import documentation, an electronic message should have been received prior to the physical shipment arriving. When the message is matched to the physical shipment a receipt message must be created and sent back. A copy of the created receipt can be printed and held on file if required.

If an eEXPORT Despatch Advice messages s message has not been received before the physical shipment, the sending establishment must be contacted to resolve the issue.

### 1.6.3 Security Requirements

There are simple security requirements that must be included in eEXPORT Despatch Advice messages s solutions that ensure authenticity of the message.

Below is the method for the security coding:

1. There must be a login method that identifies the name of the Authorised Company Official. One of the email addresses in the message must be the email address of this person (or company email address).
2. The Authorised Company Representative must have a Security Key. This key (password) must be 8 characters long, including both number and letters.
3. The Authorised Company Representative must enter their Key to create an eEXPORT Despatch Advice messages , this will need to be password masked. If the key entered does not match the stored key for the Authorised Company Representative, a message box must be displayed stating the key is incorrect. Once the correct key is entered a unique digital signature is created using the following formula:

If the Key is a345tz11 then apply:

Letters in the Key are replaced by number where a to z = 1 to 26. The string is then converted to a number.

1345202611 (Number Key)

Multiply the Number key by the last 8 digits of the SSCC number

$1345202611 \times 56456789 = 75945819971476079$

Take the last 8 digits of this number

71476079

This is the digital signature.

The digital signature is sent as part of the message and printed on the eEXPORT Despatch Advice messages s printed certificates. The key is not sent nor shown anywhere, except in the admin user.

4. The digital signature and the name of the Authorised Company Official are sent as the Security Code and Key in the EXPORT DESPATCH ADVICE MESSAGES Despatch Advice message for the

Shipper or “Consigned From” section. Where the digital signature is the Security code and the Authorised Company Official name is the key. An example would be:

CTA+BN+71476079:JOHN SMITH'

5. The Authorised Company Official name and digital signature (Security Code) must be printed on the eEXPORT Despatch Advice messages printed certificates.

#### **1.6.4 Export, Multiple Country Eligibility and Domestic Product**

The methods and messaging rules for eEXPORT Despatch Advice messages have been developed to meet the requirements for product in a single consignment to have multiple country export eligibility statements, including domestic product on board. This is achieved through the ability to have an “Eligibility Statement” for each product listed on the eEXPORT Despatch Advice messages. This is different to a normal pre-printed paper MTCs which only has the eligibility statement for the whole shipment. When an eligibility statement is used for each product of the consignment the individual products can be clearly identified and segregated by use of their respective individual GS1 compliant bar codes.

Tier 1 (which is a term used by DEPARTMENT OF AGRICULTURE to define a specific group of countries) product is identified with the special use country code of AA. This product can access the current 22 Tier 1 markets of which 3 countries currently also require their own listing.

Product suitable for countries that accept basic requirements is defined with the special use country code of ZZ.

Product that has been Domesticated, must have a defaced Official Mark (Australian Inspected) applied.

Where product has a final country destination determined at the time of the creation of the eEXPORT Despatch Advice messages, the final country destination can be used as the eligibility statement, The final country or trading block can be identified by the 2 digit ISO country code or special use codes

Examples include:

EU,SA,US,MY,JP,CN,KR,ZZ - Means each of the listed countries and countries that accept basic requirements.

EU,ZZ – Means Europe and countries that accept basic requirements

US,ZZ – Means US and countries that accept basic requirements

AU – Means domestic only (either domesticated product or product that has never been export eligible)

ZZ – Means export to countries that accept basic requirements.

AA – Means export to countries that accept Tier 1 requirements.

#### **1.6.5 Serial Number**

The serial number as printed on the paper eEXPORT Despatch Advice messages and in the electronic message is an SSCC (Serial Shipping Container Code).

The SSCC ensures that the logistic unit (the consignment on the MTC) is identified with a number that is unique worldwide.

Example of an SSCC = (00) 993123456789457689

The 18 digits are made up of (Refer to the GS1 standards for more details on SSCCs):

00 - AI for SSCC

9 – Extension Digit (this can be 1 to 9 depending on the shipment level or number usage)

93 – Country (Australia)

1234567 – Company number allocated by GS1 Australia.

8945768 – Serial number allocated by company

9 – Calculated check digit.

### **1.6.6 System Vendor Built Systems**

The System Vendor solutions must print a paper eEXPORT Despatch Advice messages in the format that is approved DEPARTMENT OF AGRICULTURE .

Any system printed paper eEXPORT Despatch Advice messages s must have in 8 point Arial Font on the bottom right hand corner the System Vendor code and version issue date. This is necessary for compliance and audit requirements. The System Vendor Code is a 3 digit number prefixed by the letters “SVC” and issued by DEPARTMENT OF AGRICULTURE on approval of the System Vendor system. The issue date code is based on the yymmdd for the version of the System Vendor system.

An example would be SVC101050515.

### **1.6.7 Consignment from a Registered Establishment direct to Export**

When a consignment is exported by a registered establishment directly to a bulk ship, container, air freight or other means for export from Australia an eEXPORT Despatch Advice messages message must be created and a corresponding self receipt message created. The purpose of these messages is to correctly manage the disposition of products, i.e. the products have left the registered establishment but have not been received by another registered establishment. These messages have a special destination establishment code. The code has the prefix ZZ and the destination 2 digit ISO country code. An example would be ZZUS for the destination establishment for a consignment to the US. An example of this type of messages is shown in the section on example messages.

Where the product is to be exported to countries requiring basic requirements the code ZZZZ is used.

### **1.6.8 Consignment from a Registered Establishment to domestication**

When a consignment is domesticated by a registered establishment an eEXPORT Despatch Advice messages message must be created and a corresponding self receipt message created. The purpose of these messages is to correctly manage the disposition of products, i.e. the products have left the registered establishment but have not been received by another registered establishment. These messages have a special destination establishment code. The establishment code for domestication is ZZAU. An example of this type of messages is shown in the section on example messages.

### **1.6.9 Product that is to be destroyed or downgraded to non-human consumption**

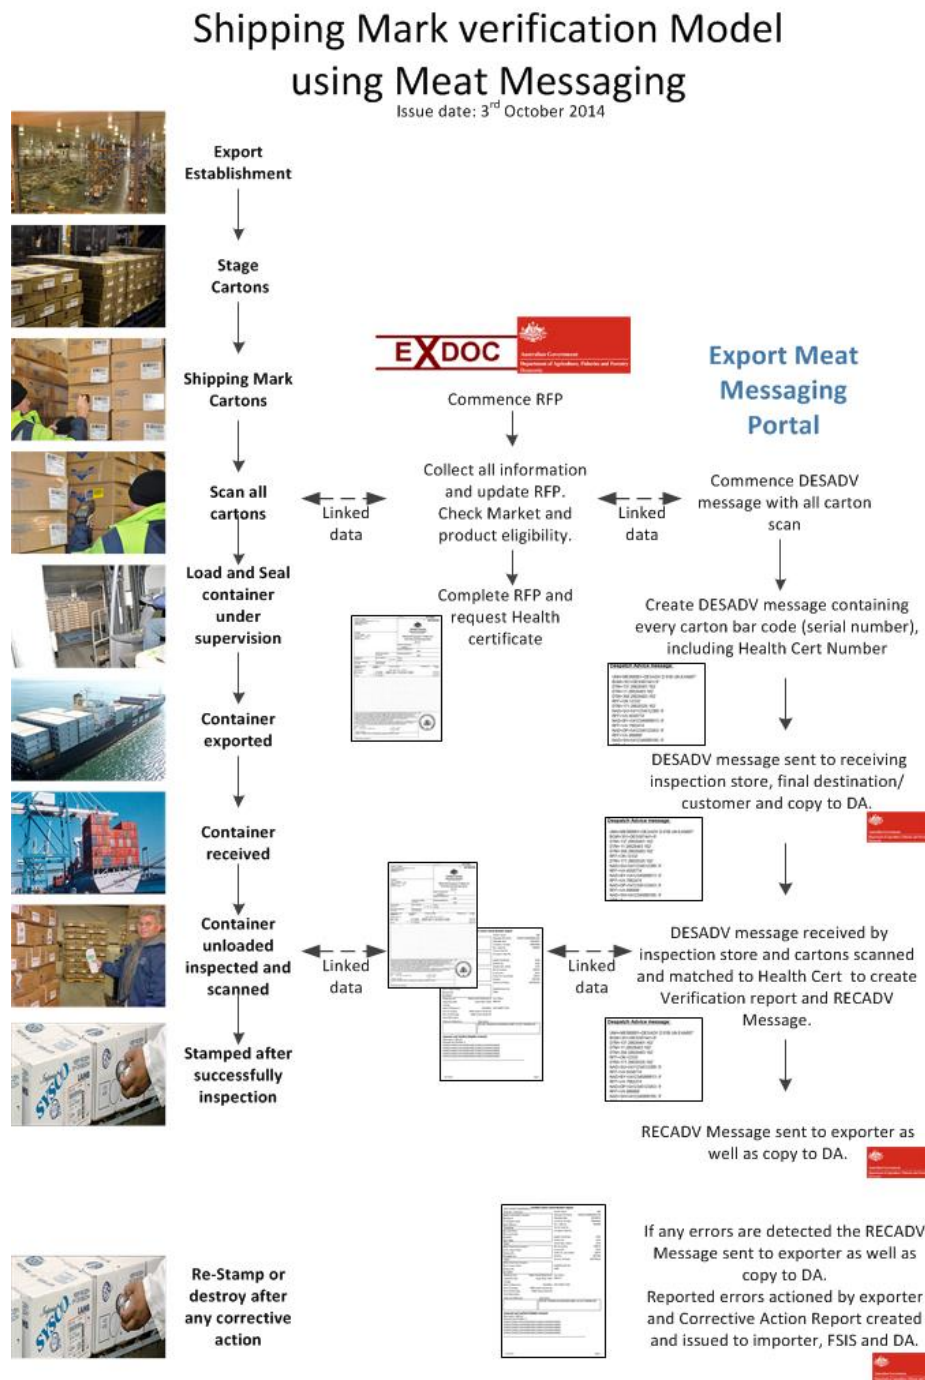

When a product is to be destroyed or downgraded to non-human consumption by a registered establishment an eEXPORT Despatch Advice messages message must be created and a corresponding self receipt message created. The purpose of these messages is to correctly manage the disposition of products, i.e. the products have left the registered establishment and will never be received by another registered establishment. These messages have a special destination establishment code. The establishment code for product to be destroyed or downgraded to non-human consumption is ZZ99. An example of this type of messages is shown in the section on example messages.

## 2 System Overview

The eEXPORT Despatch Advice message system works by recording the required export information, including all carton bar codes by the consignor (sender). The information is then sent electronically as an eEXPORT Despatch Advice message to both the consignee and DEPARTMENT OF AGRICULTURE central recording systems through the use of the Meat Messaging portal.

When the consignee (receiver) receives the physical shipment the consignee checks it against the eEXPORT Despatch Advice message and if all is correct generates an eEXPORT Receipt message. The message is then sent automatically via the meat messaging portal.

The diagram below shows how the eEXPORT Despatch Advice message system operates.

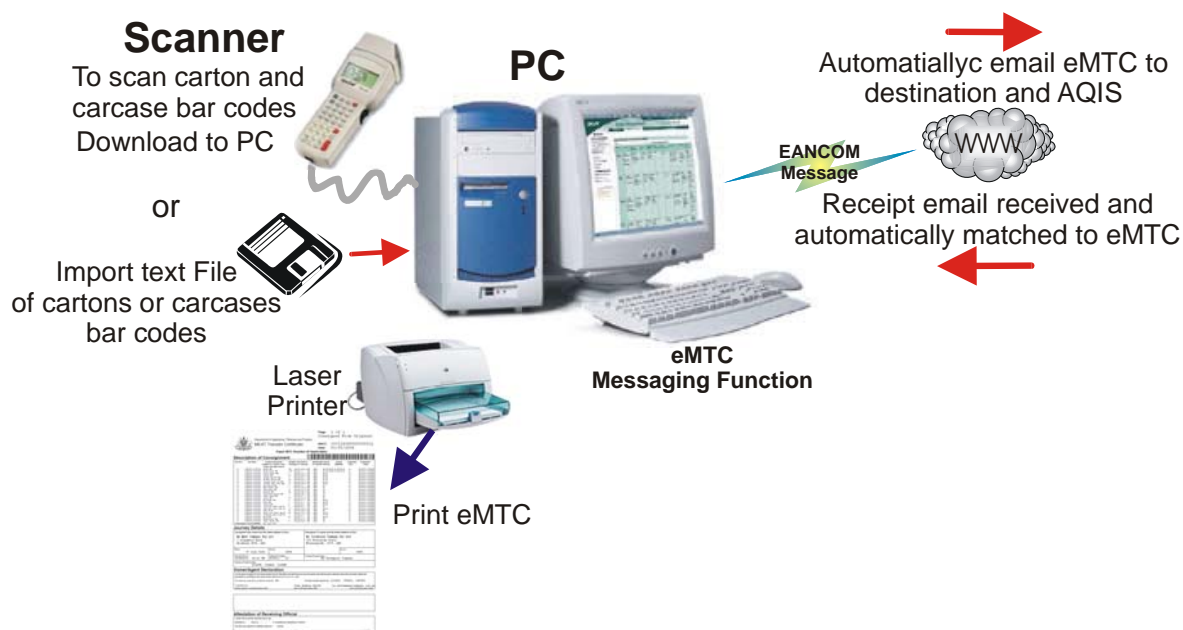

For security purposes the function to create an eEXPORT Despatch Advice messages and eEXPORT Receipt messages must be password protected through the establishment respective systems.

## 2.1 The Consigner (Sender)

The consigner's system (through password control) creates an eEXPORT Despatch Advice messages Despatch Advice message compliant to the eEXPORT Despatch Advice messages message specifications. The eEXPORT Despatch Advice messages Despatch Advice message is then sent via email to the required consignee and central recording systems.

### Creating an eMTC

The consignor's establishment system must print a hard copy MTC "look at like" where required for commercial purposes and/ or for record purposes. This includes sending a copy with the consignment as a despatch record. This may also be a requirement of specific markets e.g. EU where the DEPARTMENT OF AGRICULTURE inspector or other authorised personnel must sign the document.

Often a PDF of the MTC look a like is also created and sent as a separate email.

The consignor's establishment system can then send the eEXPORT Despatch Advice messages Despatch Advice message by email to the intended consignee and the nominated DEPARTMENT OF AGRICULTURE recipient

## 2.2 The Consignee (receiver)

The consignee (receiver) receives the emailed eEXPORT Despatch Advice messages Despatch Advice messages for each consignment. The emails have the eEXPORT Despatch Advice messages Despatch Advice message as an attachment. A process for reconciling the eEXPORT Despatch Advice messages message with the physical consignment must be implemented. The usual method for this process is by scanning each carton or carcass bar code to confirm the consignment details.

## Receiving an eMTC

Once a consignment has been checked the establishments' system creates through password control an eEXPORT Despatch Advice messages Receiving Advice message. This eEXPORT Despatch Advice messages Receiving Advice message can then be sent by automatic email to both the consignor and the DEPARTMENT OF AGRICULTURE central recording systems.

Any errors identified between the eEXPORT Despatch Advice messages Despatch Advice message and the physical consignment details are identified and reports created showing the errors. Action can be taken on the errors identified.

Options for adjusting an eEXPORT Despatch Advice messages Despatch Advice message are but sending a cancel eEXPORT Despatch Advice messages Despatch Advice message and issuing a new eEXPORT Despatch Advice messages Despatch Advice.

## 3 Data Exchange Structure

### 3.1 File Structure

The data exchanged between the establishment and DEPARTMENT OF AGRICULTURE is organised in a hierarchical manner within ASCII data files.

Each file will contain one EDIFACT interchange, where the interchange can contain only one message.

There are two message types used for the eEXPORT Despatch Advice messages system. These are the eEXPORT Despatch Advice messages Despatch Advice Message (containing the consignment information) and the eEXPORT Despatch Advice messages Receipt Message (Acknowledging the physical receipt of the consignment in good condition).

Both messages are sent by text file attachment by email.

There can only be 1 message per email.

The text attachments must have the file extension of .DSV for eEXPORT Despatch Advice messages Despatch Advice Messages and .RCV for eEXPORT Despatch Advice messages Receipt Advice Messages.

The attachment file name of the message is to be the SSCC number.

The subject line must be the file name.

e.g. 193310792350001532.DSV or 193310792350001532.RCV for an eEXPORT Despatch Advice messages .

The email "to" addresses and "from" address must be within correct segments of the eEXPORT Despatch Advice messages message.

The fixed "to" email addresses required for regulatory purposes,

**Department of Agriculture meattransfers@mgate.Department of Agriculture .gov.au**

#### 3.1.1 File Compression

The eEXPORT Despatch Advice messages system does not support the optional compression of the body part of the message.

### 3.2 Interchange Structure

The structure of interchanges and messages transmitted between eEXPORT Despatch Advice messages systems must conform to the EDIFACT Syntax Rules as defined by the International Organisation for Standardisation in ISO 9735, with the exception that functional groups are not supported and, as noted above, interchange sender/recipient addressing is not used.

An eEXPORT Despatch Advice messages system interchange at the EDIFACT level can therefore consist of:

- UNB Interchange Header (Mandatory)
- UNG Functional Group Header (Not used in this agreement)
- UNH Message Header (Mandatory)
- Message
- UNT Message Trailer (Mandatory)
- .
- .
- (
- UNH

*Message*

UNT

)

.

.

UNZ Interchange Trailer (Mandatory)

### **3.3 Message Structure**

The DEPARTMENT OF AGRICULTURE eEXPORT Despatch Advice messages system processes messages that conform to EANCOM02 (syntax version 3) based on UN/EDIFACT D01.B message construct definition, and explicitly eEXPORT Despatch Advice messages despatch Advice message and eEXPORT Despatch Advice messages Receipt Advice message as defined in this document.
